LINUX COMMANDS

Feel free

Description of some Linux commands OS Laboratory – Exercise 1

Collected and Written by Mostafa Fazli

19 October 2021

man

ls

rm

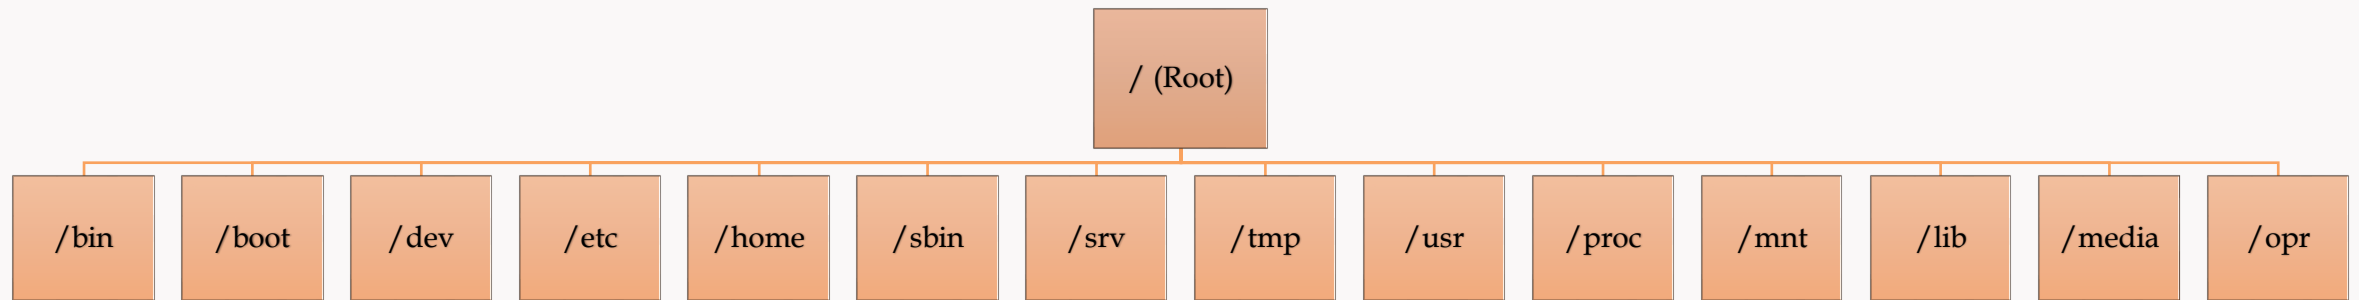

cp

cd

info

pwd

FHS Diagram

ls

ls stands for List – This command shows list of files in directory.

Structure :

ls [FLAGS] [DIRECTORY]

- l => (Long listing) => shows directory, size, date
- a => (All) => show hidden files with a dot(.), like .Videos
- lh => (Long Human readable list) => show sizes with human readable format
- F => add “/” character at the end of directory
- r => display files in reverse order
- R => (Recursively) list with sub-directories, very long listing directory trees
- ltr => show the latest modification
- lS => sort size in order
- version => show ls version
- help => show help page

ls

-n => display UID and GID

* => list the contents of directory with it's sub-directories

~ => list the contents in the user's home directory

.. => List of contents in the parent folder

```
mosfazli@pop-os:/media/mosfazli/SSD$ ls
```

```
'$RECYCLE.BIN'      'audio_2021-05-10_20-03-02.mp3 48000.pek'  "Danial's Buying One.txt"  'make file'      'shutdown system'

man

Man stands for Manual command, it used to display the manual of any command in terminal.

Structure :

`man [OPTION]... [COMMAND NAME]...`

Without option => display the whole manual of the command

`[Section Number] [command]` => when manual of command has mutlipie sections this option show specific section

`-f [command]` => display all man pages about manual

`-a [command]` => display all the available manual pages in succession

`-w [command]` => show location which the manual page of command in computer

`-I [command]` => it will be case sensitive for commands

info

As the name implies it stands for Information, it gives you detailed information for command.

Structure:

Info [OPTION] [MENU ITEM]

- a [command] => display all matching manuals
- k [command] => display all strings that manuals are same search string and all indices of all manuals and display it.
- d [command] => add DIR to INFOPATH and display the same.
- w [command] => print location of the info file
- help => show help page for info command

- This command is not installed by default on some Linux operating systems.
- For install this command write “sudo apt install info” in Terminal.

NAME

ls - list directory contents

SYNOPSIS

ls [OPTION]... [FILE]...

DESCRIPTION

List information about the FILES (the current directory by default). Sort entries alphabetically if none of **-cftuvSUX** nor **--sort** is specified.

Mandatory arguments to long options are mandatory for short options too.

-a, --all

do not ignore entries starting with .

-A, --almost-all

do not list implied . and ..

--author

with **-l**, print the author of each file

-b, --escape

print C-style escapes for nongraphic characters

--block-size=SIZE

with **-l**, scale sizes by SIZE when printing them; e.g., **'--block-size=M'**; see SIZE format below

-B, --ignore-backups

do not list implied entries ending with ~

-c

with **-lt**: sort by, and show, ctime (time of last modification of file status information); with **-l**: show ctime and sort by name; otherwise: sort by ctime, newest first

-C

list entries by columns

--color[=WHEN]

colorize the output; WHEN can be 'always' (default if omitted), 'auto', or 'never'; more info below

-d, --directory

list directories themselves, not their contents

-D, --dired

generate output designed for Emacs' dired mode

-f

do not sort, enable **-aU**, disable **-ls --color**

-F, --classify

append indicator (one of */=>@|) to entries

--file-type

likewise, except do not append '*'

--format=WORD

across **-x**, commas **-m**, horizontal **-x**, long **-l**, single-column **-l**, verbose **-l**, vertical **-C**

```

unix_chkpwd (8) - Helper binary that verifies the password of the current user
unlink (1) - call the unlink function to remove the specified file
update-ca-certificates (8) - update /etc/ssl/certs and ca-certificates.crt
update-initramfs.conf (5) - configuration file for update-initramfs
update-locale (8) - Modify global locale settings
uri (7) - uniform resource identifier (URI), including a URL or URN
URI::ldap (3pm) - LDAP Uniform Resource Locators
URI::URL (3pm) - Uniform Resource Locators
url (7) - uniform resource identifier (URI), including a URL or URN
urn (7) - uniform resource identifier (URI), including a URL or URN
user-dirs.conf (5) - configuration for xdg-user-dirs-update
user.conf.d (5) - System and session service manager configuration files
usermod (8) - modify a user account
utime (2) - change file last access and modification times
utimes (2) - change file last access and modification times
uuid (3) - DCE compatible Universally Unique Identifier library
uuidparse (1) - a utility to parse unique identifiers
validlocale (8) - Test if a given locale is available
variables (5) - Format of specifying variable names to SNMP tools.
verify (1ssl) - Utility to verify certificates
veritysetup (8) - manage dm-verity (block level verification) volumes
vgcfcgbackup (8) - Backup volume group configuration(s)
vgcfcgrestore (8) - Restore volume group configuration
vimdiff (1) - edit two, three or four versions of a file with Vim and show differences
wctype (3) - wide-character classification
wpa_supplicant.conf (5) - configuration file for wpa_supplicant
x509 (1ssl) - Certificate display and signing utility
x509 (7ssl) - X.509 certificate handling
x509v3_conf (5ssl) - X509 V3 certificate extension configuration format
x86_64-linux-gnu-ar (1) - create, modify, and extract from archives
xbiff (1) - mailbox flag for X
xcalc (1) - scientific calculator for X
xdg-user-dirs-update (1) - Update XDG user dir configuration
xdriinfo (1) - query configuration information of DRI drivers
xfce4-dict (1) - a client program to query different dictionaries
xfce4-notifyd-config (1) - configuration GUI for xfce4-notifyd
xinput (1) - utility to configure and test X input devices
xkeyboard-config (7) - XKB data description files
xmag (1) - magnify parts of the screen
xml2-config (1) - script to get information about the installed version of GNOME-XML
xmodmap (1) - utility for modifying keymaps and pointer button mappings in X
xorg.conf (5) - configuration files for Xorg X server
xorg.conf.d (5) - configuration files for Xorg X server
Xsession.options (5) - configuration options for Xsession (5)
xsetwacom (1) - commandline utility to query and modify wacom driver settings.
XStandards (7) - X Window System Standards and Specifications
Xwrapper.config (5) - Xorg X server binary wrapper
xzdiff (1) - compare compressed files
zdiff (1) - compare compressed files

```

```
mosfazli@pop-os:~/Downloads/test$ man ls
```

```
mosfazli@pop-os:~/Downloads/test$ info ifconfig
```

```
mosfazli@pop-os:~/Downloads/test$ info -a ifconfig
```

```
mosfazli@pop-os:~/Downloads/test$ info -w ifconfig
```

```
*manpages*
```

```
mosfazli@pop-os:~/Downloads/test$
```

rm

rm command stands for Remove and it used for remove files or folders.

Structure:

rm [OPTION] FILE

-i => ask user to make sure about delete file. You can write Y for Yes and N for No

-f => (Force) => remove the file forcefully

-r => performs a tree walk and will delete all files and sub-directories recursively of parent directory

-version => display the version of rm command

-- for remove files that have a '-' in the first of names

cp

cp command stands for Copy, this command copy files.

Structure:

cp [OPTION] [SOURCE FILE 1] [SOURCE FILE 2] ([SOURCE FILE 3]) ([DESTONATION FILE])

-if we use just one source file and destination file, it copy contents of source file into destination file.

-if use some source files and one destination file, it copy contents of all source files into destination file.

-R [SOURCE FILE] [DESTONATION FILE] => copy all files of the source directory into destination directory.

-i => (Interactive) => warns you about overwriting

-b => (Backup) => create backup of destination file in the same folder with different name and format.

-f => (Force) => if you need to permission for copy, use this command.

-p => (Preserve) => show time of the last data modification and time of last access.

```
mosfazli@pop-os:~/Downloads$ mkdir test
mosfazli@pop-os:~/Downloads$ ls
google-chrome-stable_current_amd64.deb  'protonvpn-stable-release_1.0.1-1_all (1).deb'  protonvpn-stable-release_1.0.1-1_all.deb  test  windscribe-cli_1.4-51_amd64.deb
mosfazli@pop-os:~/Downloads$ cd test
mosfazli@pop-os:~/Downloads/test$ touch a.txt
mosfazli@pop-os:~/Downloads/test$ a.txt
a.txt: command not found
mosfazli@pop-os:~/Downloads/test$ cat a.txt
Hello, Im mostafa Fazli, this is test for os labratory !!!
mosfazli@pop-os:~/Downloads/test$ ls
a.txt
mosfazli@pop-os:~/Downloads/test$ cp a.txt b.txt
mosfazli@pop-os:~/Downloads/test$ ls
a.txt  b.txt
mosfazli@pop-os:~/Downloads/test$ █
```

pwd

pwd stands for Print Working Directory, this command show the location of you are there.

Structure:

pwd [OPTION]

-l prints the symbolic path

-p prints the actual path

*This command uses for special folders like system folders)

```
mosfazli@pop-os:~$ cd /media
mosfazli@pop-os:/media$ cd mosfazli
mosfazli@pop-os:/media/mosfazli$ cd University/
mosfazli@pop-os:/media/mosfazli/University$ pwd
/media/mosfazli/University
mosfazli@pop-os:/media/mosfazli/University$ pwd -L
/media/mosfazli/University
mosfazli@pop-os:/media/mosfazli/University$ █
```

cd

cd command uses for change directory, this command usually used by two ways:

- with absolute address like `cd /home/"USERNAME"/Documents`
- with relative address like `cd Documents`

Structure:

`cd [OPTION]`

`../` => switch directory one level up

`../..` => switch directory two level up

`../(folder name)` => switch directory up to observe folder name

`-` => change directory to the previous working directory

`~` (this option like write nothing) => it change directory to home directory, In the other words it works like write nothing

```
mosfazli@pop-os:~$ cd /media/mosfazli/SSD
mosfazli@pop-os:/media/mosfazli/SSD$ cd
mosfazli@pop-os:~$ cd /media
mosfazli@pop-os:/media$ cd mosfazli
mosfazli@pop-os:/media/mosfazli$ cd SSD
mosfazli@pop-os:/media/mosfazli/SSD$ cd ../
mosfazli@pop-os:/media/mosfazli$ cd SSD
mosfazli@pop-os:/media/mosfazli/SSD$ cd ../../
mosfazli@pop-os:/media$ cd /media/mosfazli/SSD
mosfazli@pop-os:/media/mosfazli/SSD$ cd -
/media
mosfazli@pop-os:/media$ cd ~
mosfazli@pop-os:~$
```

fhs

fhs stands for File Hierarchy Structure (or Standard), it defines directory contents in Unix-like operating systems.

All file and directories appear under the root directory that shows with /
Some of this files and folders may be different in different Linux distributions.

/ (Root): root directory of the entire file system hierarchy.

The only root user has the right to write under this directory

/bin : commands that need to be available in single-user mode; for all users like cat, ls, ping, man.
Contains binary executables

fhs

/boot : Boot loader files like kernels, initrd.

Kernel initrd, vmlinux, grub files are located under /boot

You can change bootloader in this folder.

/dev : Essential device files like /dev/

These include terminal devices, usb, or any device attached to the system.

Example: /dev/tty1, /dev/usbmon0

/etc : Host-specific system-wide configuration files.

Contains configuration files required by all programs.

fhs

/home : saved files, personal settings, etc.

Home directories for all users to store their personal files.

/lib : Libraries essential for the binaries in /bin/ and /sbin/.

Library filenames are either ld or lib

/media : Mount points for removable media such as CD-ROMs or Floppy drivers.

Temporary mount directory for removable devices.

/mnt : Temporarily mounted filesystems.

fhs

/opt : Optional application software packages.

Contains add-on applications from individual vendors.

/sbin : Essential system binaries like init.

Just like /bin, /sbin also contains binary executables.

The linux commands located under this directory are used typically by system administrator, for system maintenance purpose.

/srv : Site-specific data served by this system, such as data and scripts for web servers, data offered by FTP servers, and repositories for version control systems.

srv stands for service.

Contains server specific services related data.

fhs

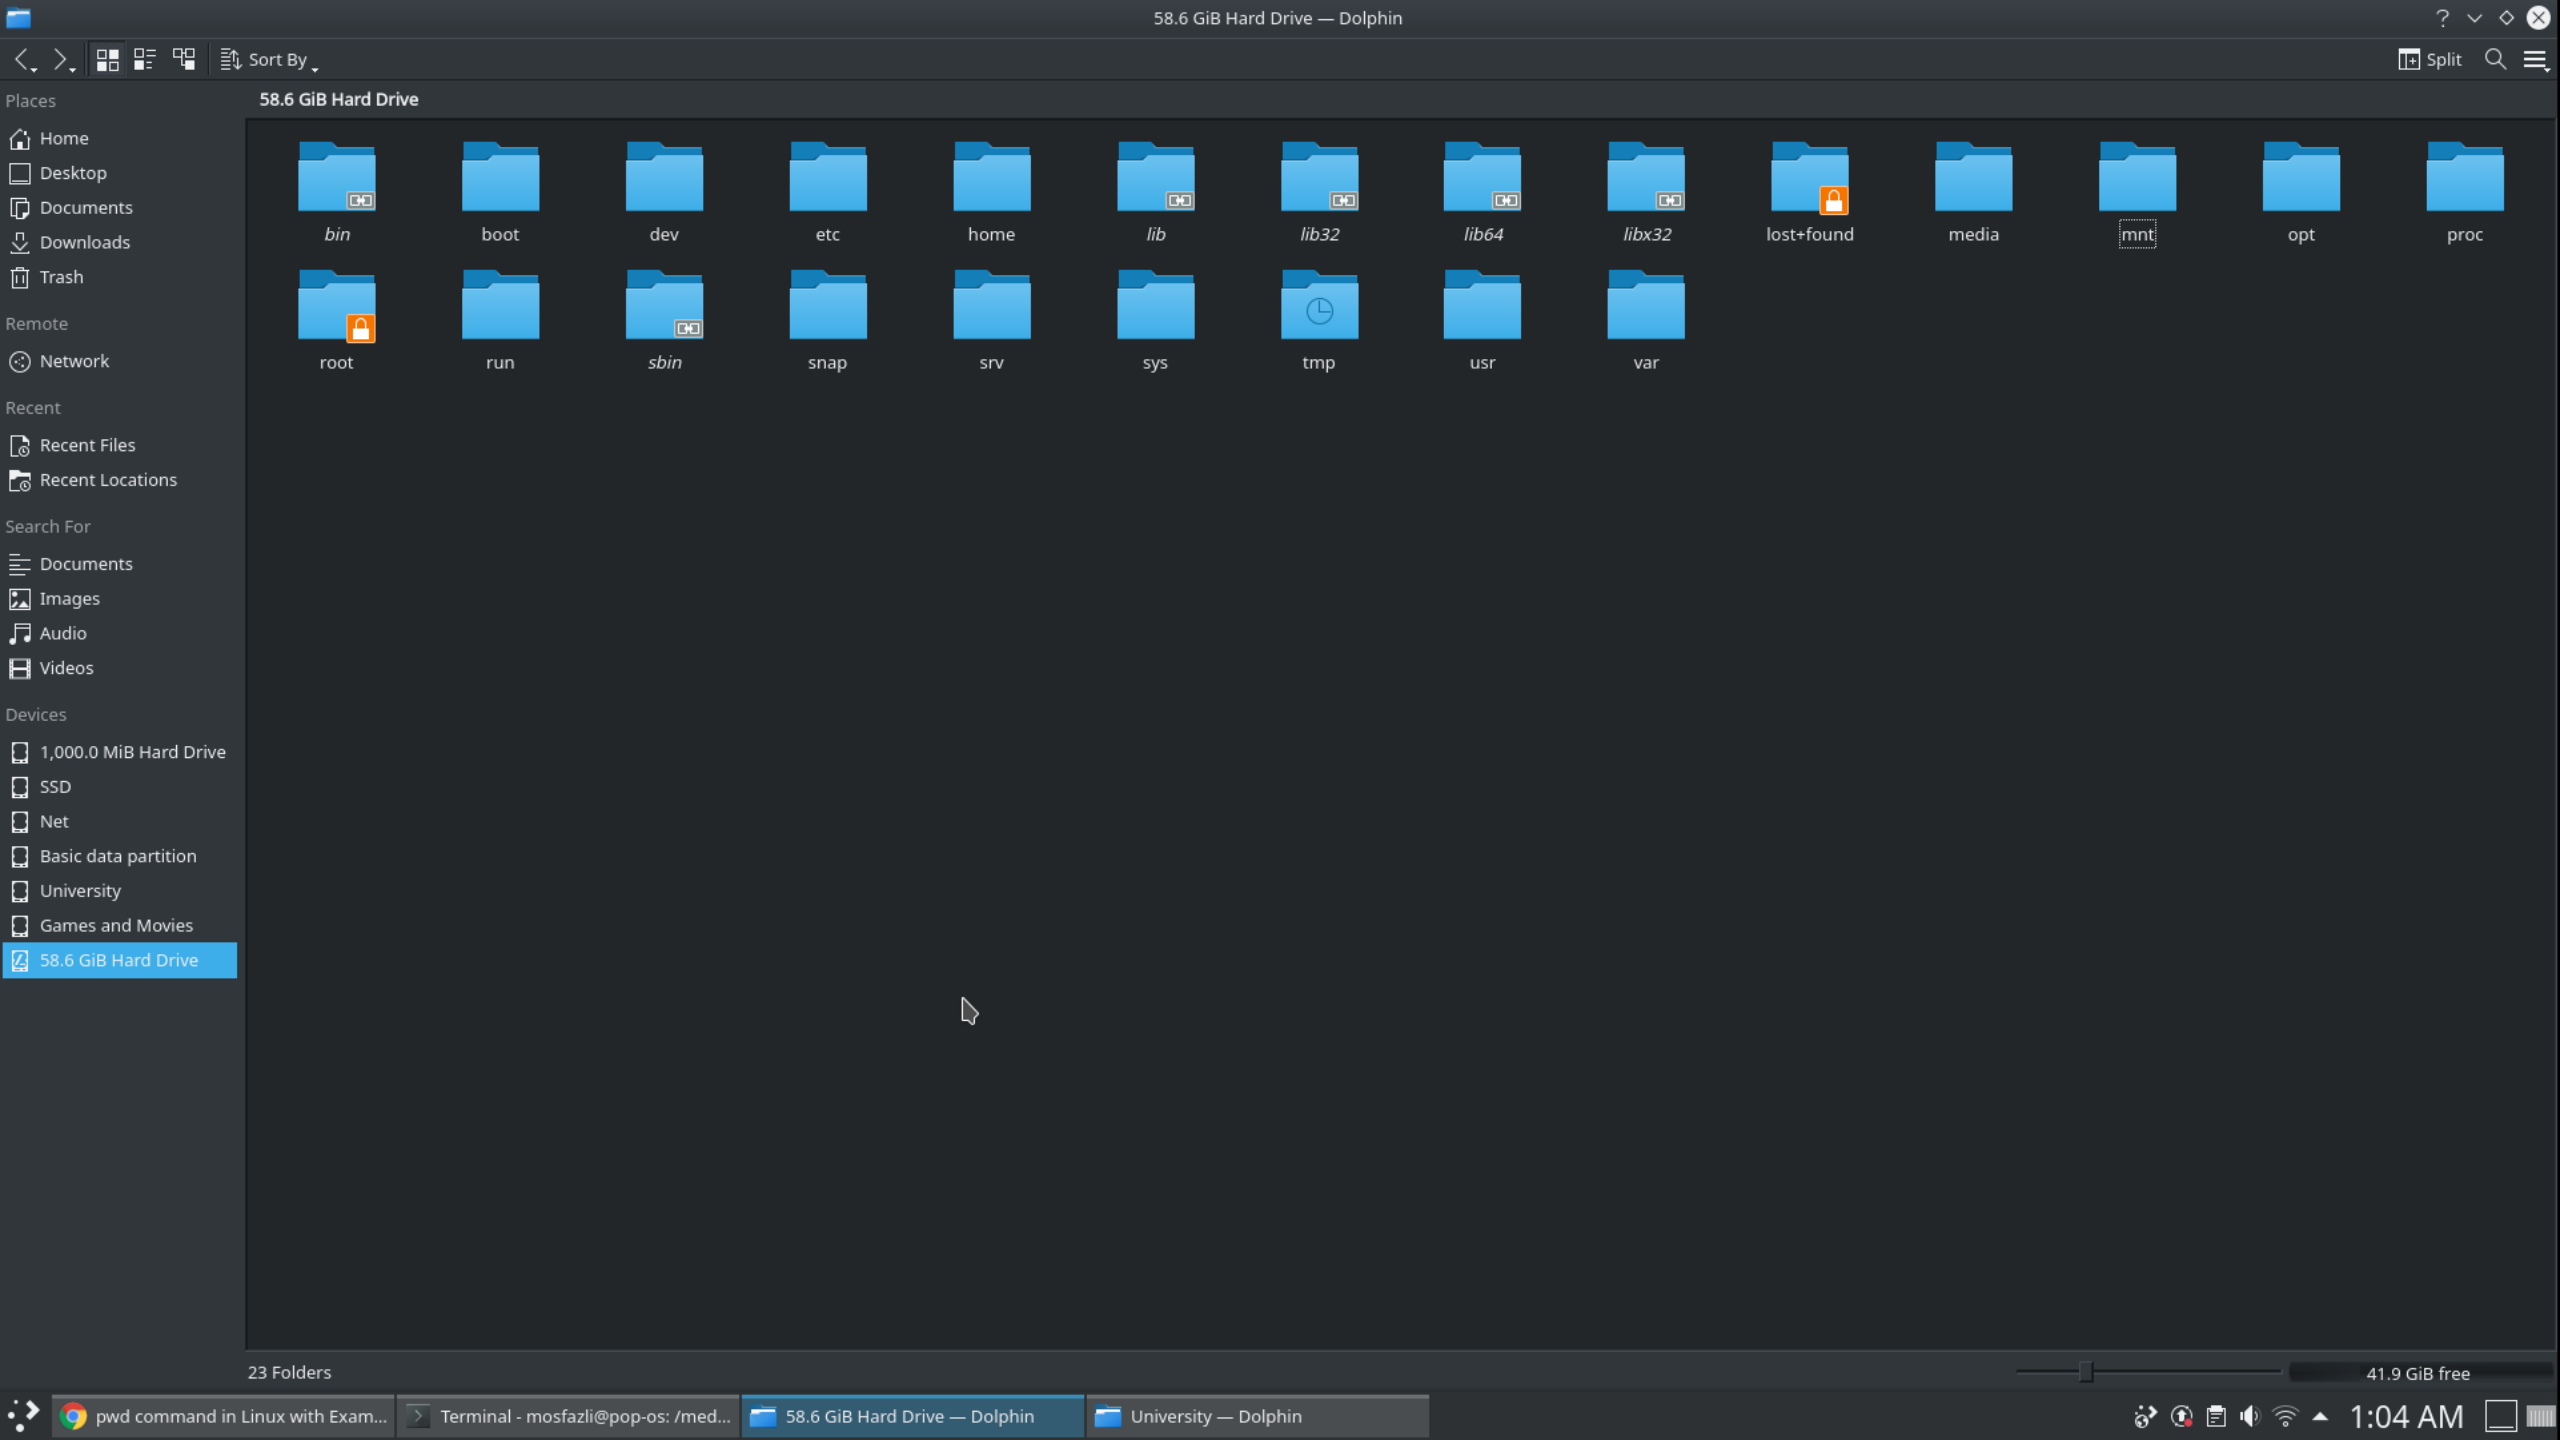

/tmp : Temporary files. may be severely size restricted.

Files under this directory are deleted when system is rebooted.

/usr : Secondary hierarchy for read-only user data; contains the majority of (multi-)user utilities and applications.

/proc : Proccess of linux, like system monitor located in this folder
Contains information about system process.
